

DENTAL CLINIC

TORONTO, CANADA

A dental clinic in Toronto, Canada has chosen Invisium to enhance visitor screening with touchless temperature checks in response to COVID-19. Due to local and national guidance, medical offices – like this dental clinic – are required to screen all employee and patient temperatures upon entry to the office's lobby using a non-contact infrared thermometer.

Toronto Dental Clinic Chooses Invixium for Touchless Visitor Screening with Temperature Checks

When this dental clinic planned to reopen in the late spring of 2020, its HR manager searched for a solution that was both touchless and paperless to adhere to local COVID-19 guidelines and further the office's digital transformation progress. Biometrics offered an attractive, unique solution to each of the dental clinic's needs by providing a high level of modernness, the ability to integrate with their patient management system (PMS) and human resources management system (HRMS) and touchless time tracking and patient screening.

Mask Detection And Touchless Temperature Screening Modernize Health Clinic Security

IXM TITAN with Enhancement Kit emerged as an obvious frontrunner solution because no other option on the market offered the same breadth of integration options and touchless features. Unlike other touchless biometric solutions, Invixium's face recognition via IXM TITAN incorporates the highly-sought-after solution that performs face recognition while wearing a mask so staff can clock in and out without removing their face coverings and without touching any shared surfaces. And, touchless elevated body temperature detection from the Enhancement Kit takes place without removing a protective mask because it screens temperature at the tear duct. The tear duct, or inner canthus, is known as the skin surface location with the highest correlation to core body temperature when screened, so it provides a strong indication of a person's likelihood of having a fever. In addition to its touchless and mask-inclusive features, the Invixium solution boasts user-focused design, speed and accuracy.

PROBLEM

Ontario requires essential medical services to screen temperatures and mandate masks for all staff and visitors. When COVID-19 struck, the clinic required a solution for touchless temperature screening without compromising their ongoing paperless initiative.

SOLUTION

The dental clinic installed IXM TITAN with Enhancement Kit for touchless temperature screening and face recognition while wearing a mask to screen patients and clock in staff. Invixium also provided a custom integration with the clinic's PMS and HRMS.

BENEFITS

- Adherence to government mandates for temperature screening and mask wearing
- Touchless features and temperature screening greatly reduce the likelihood of illness spreading at the clinic
- Seamless employee and visitor management via
- software integration

"Our staff and patients' safety is our priority. Investing in touchless products from Invixium has proven to be one of our greatest assets in ensuring our office is a healthy place to be. I love that Invixium is a Toronto company, which allows us to benefit from local installers and customer service while also supporting our local economy. I'm confident that TITAN is helping us do all we can to protect the people who come to our clinic, and that is what matters most to us."

Shagofa Azizi, HR Manager

"Being chosen by a dental clinic here in Toronto proves that IXM TITAN with Enhancement Kit is a trustworthy solution for healthy institutions. We are very proud to offer highly advanced touchless solutions for COVID-19 regulations to businesses here in our home city. This installation shows how well-suited our solutions are to protecting staff and patients at busy clinics where health is the paramount concern."

Shiraz Kapadia, CEO & President at Invixium
